Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

documents 1 to 4 do not disclose or suggest configurations in which the aforementioned quinoxaline compounds are diamines, and said polymers are not polyimides that can be obtained by reacting a diamine and a tetracarboxylic acid component. In addition, document 5 discloses liquid crystal polymers that have quinoxaline skeletons, but the structures thereof are different from those of the compounds from the inventions set forth in the present application. Meanwhile, the inventions set forth in the present application can be said to exhibit an effect whereby it is possible to provide polymers that exhibit charge carrier transport properties in addition to superior heat resistance characteristics, coating strength characteristics and thin film formation properties as a result of introducing a specific quinoxaline skeleton into the main chain of the polyimide.
